

CRYSTAL ROCK / BY ARIK LEVY

Certainly not from the Stone Age but closer to the fictional Kryptonite, Crystal Rock appears in the cave of the future as an ambassador to the fusion of nature and man, light and reflection, transparency and mass. All these characteristics are gathered within a perfectly cut, yet roughly sculpted contemporary silex that interacts between light and darkness, suspended in air like a frozen shooting star. It's as if the world stood still the moment you gaze upon it, its multiple reflections and deflections fascinating during the day and even more dynamic at night, when lighted. Crystal Rock's LED source highlights the artistic glassmaking process and advanced gluing techniques, gleaming on its inner curved surfaces and defining form on cut facets.
